Frameworks: Ruby on Rails, nodeJS, jQuery, Bootstrap.
Databases: mySQL/mariaDB, SQL Server, postgreSQL, Sybase, mongoDB, redis.
WebServers: Apache, IIS, nginx, passenger.
OS: GNU/Linux (Debian based), UNIX (Solaris), Microsoft Windows and MacOS
Cloud & SaaS: Docker, Google WorkSpace for Education, Digital Ocean, Zoom, Slack, mural, SendGrid, Mailgun, Git (Github, BitBucket, GitLab).

Experience

IT Consultant

Independent - (2008 - present)

- Full-stack software engineer with hands-on expertise and practical experience in systems administration, database management, UX/UI, API deployment, and web platform operations.
- Provided freelance consulting hardware and software development services for small businesses and nonprofit organizations, delivering practical technology solutions through both on-site and remote environments, aligned with organizational needs and constraints.
- Delivered training, mentoring, and technical support for users and clients across all levels of technical proficiency, facilitating effective technology adoption.
- Supported organizations in building and strengthening their online presence, including website development, corporate branding materials, and workflow optimization.

IT Manager

Grupo LVI - TAE - (November 2023 - September 2024)

- Supervised IT team while managing local and cloud infrastructure, technical support operations, and technology-related project delivery.
- Led resource optimization and standardization initiatives to improve operational efficiency and reduce infrastructure and maintenance costs.
- Directed the migration of legacy PHP platforms to modern technology stacks,

improving maintainability and long-term scalability.
- Developed Ruby on Rails applications, including a multi-site content management system (CamaleonCMS based) supporting multiple organizations.
- Provided technology leadership and operational support across the entire organizational group, including a publishing company, an educational institution, and several nonprofit organizations.

Head of Technological Innovation Department
SEMARNAT - CONABIO - (July 2021 – November 2023)
- Development, management, and maintenance of major biodiversity and environmental platforms, including EnciclоVida, Mosaico Natura, Entre Azul y Verde, Biodiversidad Mexicana (Ruby on Rails).
- Supervised and coordinated third-party contractors to ensure alignment with technical and project requirements.
- Designed and implemented an internal real-time communication solution to improve all teams coordination and operational efficiency.

Software Developer Specialist
Fondo Fideicomiso para la Biodiversidad - CONABIO - (June 2014 – June 2021)
- Developed full-stack Ruby on Rails science communication intended web platforms.
- Led legacy application migrations, including updates, maintenance and development.
- Coordinated internal and external teams for short- and mid-term IT projects.
- Designed and implemented a successful internship program that expanded development capacity and significantly reduced outsourcing costs.

Full Stack Developer
UNAM - Dirección General de Administración Escolar - (March 2012 – July 2015)
- Development, maintenance, and migration of legacy web applications (C and PHP) to modern Ruby on Rails platforms supporting the national admission test registry.
- Provided training and technical support for staff in local and remote environments.
- Acted as a communication bridge between development, system administration, and graphic design teams, facilitating collaboration and translating technical requirements.

Software Developer
Marketing One S.C - (2011)
- Developed the company's website and maintained legacy web applications supporting business operations.
- Implemented a statistical model for benchmarking car insurance policies.
- Provided IT support across technical systems and end-user environments.

Software Development Internship
Castillo Miranda y Cía. S.C. - (2010 - 2011)
- Performed the corporate website rebranding project, implementing visual and structural updates across both internal and external websites.
- Handled client requests and implemented feature enhancements for the corporation's hospitality and tourism division.
- Provided local and remote technical support for users and internal systems.

Technical Support Engineer
RaGo Instalaciones S.A. - (2009 - 2010)

- Conducted budget analysis for construction bids and developed corporate stationery and branding materials.
- Implemented and managed the local network infrastructure while providing on-site technical support.
- Delivered graphic and web design solutions for internal and external communication needs.

Technical Support Analyst
All Jokers Meeting Planners - (2008 - 2009)

- Managed hardware and software assets, provided technical support, and developed web design solutions.

Technical Support Internship
MP Marketing - (2008)

- Provided company-wide technical support through a ticketing system, assisting users in both local and remote environments.

Education

UNAM, Facultad de Ciencias, B. in Computer Science - Attended from 2006 to 2008
